Online Real Estate Mgt Sys.

Introduction :

→ KVD estates is a web based application which connects the bridge b/w property seekers & property owners.

Purpose of system :

→ The primary goal is to provide a systematic approach to property listing, tenant application & maintance tracking with a digital approach

Stakeholders :

→ Property seekers (user searching to buy or rent)

→ Property owner (user listing to sell or rent property)

→ System admin (verities listing & manages platform)

Functional requirements:

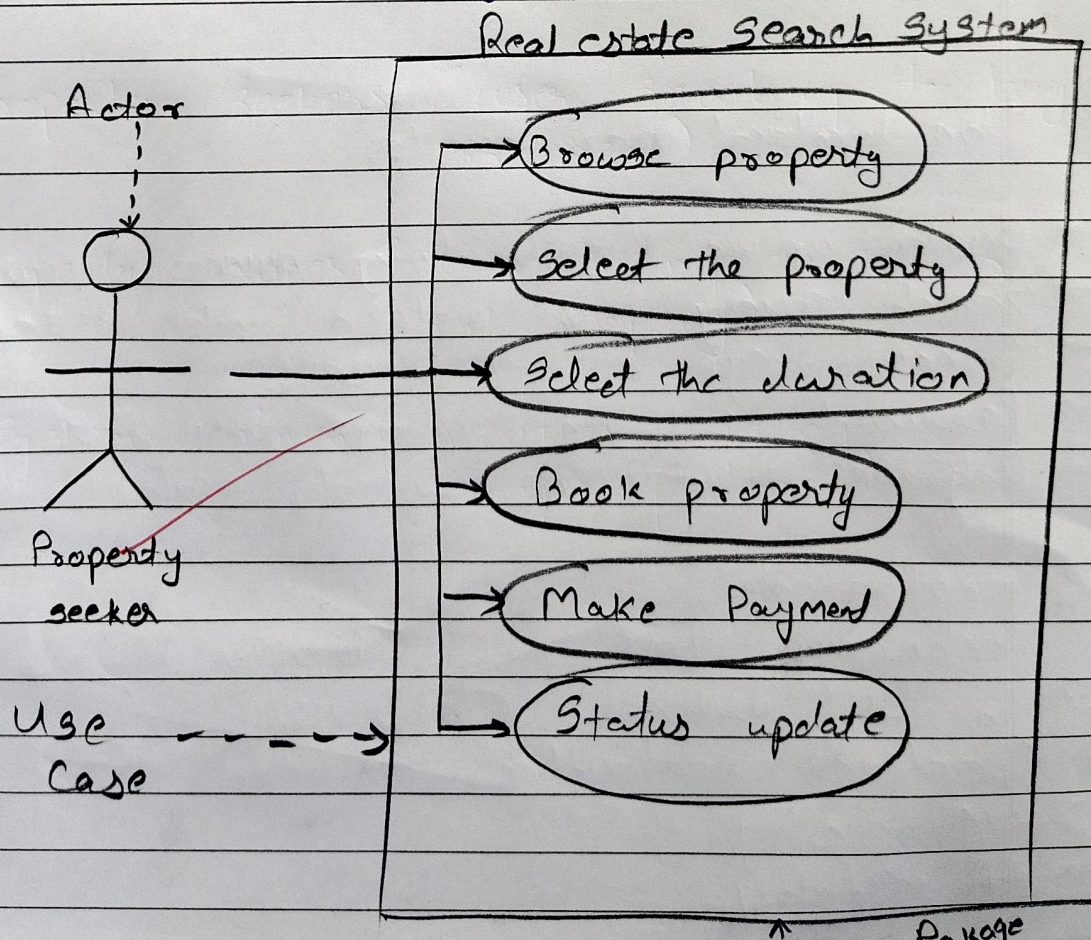
→ Secure registration & log in with mandatory 2fa.
→ Listing remain pending until approve by admin
→ System must also validate aadhar
→ Seekers can filter by location, price & type
→ Owners can create, ~~an~~ update & delete
→ Seekers can define a duration & pay the first month rent + deposite to confirm booking
→ Seekers can raise issues with photo uploads
→ Email alerts for rent due dates or tickets update
→ System must show "Paid" vs "Overdue" status for rent.
→ User can update personal details & contact info.

Non functional requirements:

→ System uptime 99% during business hour.
→ Search query must return under a sec
→ Concurrancy of 10k users.
→ Password encryption using SHA 256.
→ Database should be vertically scalable

Constraints:

→ Technology: HTML, JS, CSS, Django, MySQL
→ To be delivered in 10 weeks
→ Operations restricted to Indian pincode
→ KYC mandatory.
→ 2FA mandatory.

Use case: Search and Book Property
Actor: Property Seeker
Precondition :- User is logged in,
Property is Live
Property is not Booked


Main Flow :-
1. Seeker enters search criteria
2. System returns list of matching property
3. Seeker clicks Property
4. Seeker clicks Book Now / Pay Token
5. System validates Payment
6. System updates property status to status = Booked
7. System notifies the ~~seller~~ owner and generates digital receipt for seeker.
